

Aliva to the rescue

When problems with the supply and installation of the stone rainscreen cladding system arose at the new Quad Centre in Derby, construction work on the prestigious cinema, media and arts complex was temporarily put on hold. With the potential for significant delay, Aliva Engineering Ltd stepped in, working closely with main contractors Morgan Ashurst and other supply chain partners, to ensure project-overruns and any additional costs were kept to a minimum. Having the necessary design experience and the available resources to get the project back on track, Aliva Engineering was tasked with installing Metsec and cementitious board, the rainscreen system, stone tiles, copings and flashings. Key design features, including multi-angular elevations and sloping window-details required specialist tiling; but despite this and difficulties with access to most elevations, Aliva Engineering provided an outstanding service to Morgan Ashurst and completed the work well within aggressive time-lines. For further information, telephone Aliva on **01189 635900**.
