

Derby Quad Centre: Outstanding service delivery

When problems with the supply and installation of the stone rainscreen cladding system arose at the new Quad Centre in Derby, **ALIVA ENGINEERING LTD** stepped in to ensure project over-runs and any additional costs were kept to a minimum.

Having the necessary design experience and resources, Aliva Engineering were tasked with installing Metsec and

cementitious board, the rainscreen system, stone tiles, copings and flashings.

In order to achieve the architectural objectives, Aliva Engineering re-designed the Metsec layout, followed by the architectural designs for the rainscreen system and stone modules with the loadings being applied to the floor slabs. The team worked extended hours to

help meet critical deadlines and, had on-site facilities ready to modify stone panels if necessary.
